

ECO MISSION OF EVISA TRAVEL

The world problem today is abrupt climate change, leading to problems of energy, water and food security. Therefore, Evisa Travel works not only to improve the quality of services provided by the service, but also takes care of the future by introducing "green office" standards into the office space.

Waste separation, energy and water savings, the transition to digital accounting, the rejection of paper products in the office are just a small list of steps towards a big goal. Our employees are not only trained in the basics of sustainable development, but also make efforts to obtain a certified status.

The future of our planet, our children begins with simple steps: turn off the lights in time, print out an electronic invoice, replace a business card with a QR code. Let us make our planet cleaner and greener together with Evisa Travel. Travel mindfully!
